The medieval and early modern English imaginary encompasses a broad range of negative and positive dismemberments, from the castration anxieties of Turk plays to the elite practices of distributive burial. This study argues that representations and instances of bodily fragmentation illustrated and performed acts of exclusion and inclusion, detaching not only limbs from bodies but individuals from identity groups. Within this context it examines questions of legitimate and illegitimate violence, showing that such distinctions largely rested upon particular acts' assumed symbolic meanings. Specific chapters address ways dismemberments manifested gender, human versus animal nature, religious and ethnic identity, and social rank. The book concludes by examining the afterlives of body parts, including relics and specimens exhibited for entertainment and education, contextualized by discussion of the resurrection body and its promise of bodily reintegration. Grounded in dramatic works, the study also incorporates a variety of genres from midwifery manuals to broadside ballads.

Two opposing views of the future in the Middle Ages dominate recent historical scholarship. According to one opinion, medieval societies were expecting the near end of the world and therefore had no concept of the future. According to the other opinion, the expectation of the near end created a drive to change the world for the better and thus for innovation. Close inspection of the history of prognostication reveals the continuous attempts and multifold methods to recognize and interpret God's will, the prodigies of nature, and the patterns of time. That proves, on the one hand, the constant human uncertainty facing the contingencies of the future. On the other hand, it demonstrates the firm believe during the Middle Ages in a future which could be shaped and even manipulated. The handbook provides the first overview of current historical research on medieval prognostication. It considers the entangled influences and transmissions between Christian, Jewish, Islamic, and non-monotheistic societies during the period from a wide range of perspectives. An international team of 63 renowned authors from about a dozen different academic disciplines contributed to this comprehensive overview.

'A compelling invitation to imagine the future we want' –BRIAN CHRISTIAN, author of The Most Human Human By 2062 we will have built machines as intelligent as us – so the leading artificial intelligence and robotics experts predict. But what will this future look like? In 2062, world-leading researcher Toby Walsh considers the impact AI will have on work, war, economics, politics, everyday life and even death. Will automation take away most jobs? Will robots become conscious and take over? Will we become immortal machines ourselves, uploading our brains to the cloud? How will politics adjust to the post-truth, post-privacy digitised world? When we have succeeded in building intelligent machines, how will life on this planet unfold? Based on a deep understanding of technology, 2062 describes the choices we need to make today to ensure that the future remains bright. 'Clarity and sanity in a world full of fog and uncertainty – a timely book about the race to remain human.' –RICHARD WATSON, author of Digital Vs. Human and futurist-in-residence at Imperial College, London 'One of the deepest questions facing humanity, pondered by a mind well and truly up to the task.' –ADAM SPENCER, broadcaster
