A Hex Head Bolt is designed to be tightened with a standard spanner or ratchet and socket. Manufactured to ISO 4014 or DIN 931, and therefore includes an unthreaded section of the shaft. A hex drive permits a greater torque load to be applied to the joint over most other drive types.

It also contains a multimedia device with the full texts of the lectures presented at the conference, including the 5 keynote lectures, and almost 150 selected contributions. The contributions on creative and scientific aspects in the conception and construction of structures, on advanced technologies and on complex architectural and structural applications represent a fine blend of

This is the first English edition of an established work on cost-driven product design and development. It offers tried and tested methods for understanding, influencing and reducing product costs. The methodology and organization of cost management, as well as the effects on each type of cost are described. Using this knowledge the product developer can assume

responsibility for costs.  
There are numerous examples  
and detailed derivation of  
results.

The German version of this standard work has provided generations of engineers with a comprehensive source of reference and guidance, on which they can rely throughout their professional lives, and is due to appear in its 19th edition. Now, for the first time, the key sections of this authoritative work are available in English. While DIN standards are retained throughout, the ISO equivalents are given wherever possible. Each

organizations. These organizations exist in every country and may be private or governmental organizations. The first national standardization th organizations were founded in the early decades of the 20 century and were aimed at rationalizing industrial production. Their mode of operation reflects the sense of co operation at the national level and - in the telecommunications and electrotechnical field - at the intemationallevel as well. Now, however, the scene has changed, with companies operating internationally. Standards for products, processes, and

services are crucial factors in determining success or failure on a fiercely competitive market, especially when functional compatibility is a prerequisite, as is the case in computer and telecommunications technologies. As a consequence, rather homogeneous needs of participants in standardization have given way to conflicting interests. This prompts a discussion about the traditional role of national standardization organizations. They increasingly depend on their exclusive links to the

organizations ISO and IEC,  
and, in the case of Europe,  
the regional organizations

cases, formal  
standardization  
organizations are not the  
obvious bodies for  
developing standards to meet  
business needs. Is this  
inevitable or could they  
improve performance and  
regain their market share?

developments in  
standardization at the  
international, European, and  
national levels.
