Transfusion Medicine and Hemostasis

Transfusion Medicine and Hemostasis is a manual-style book that links transfusion medicine and hemostasis to laboratory methods and diagnostic tests engaged in routine and specialized coagulation laboratories. The book is divided into two main parts with chapters that are brief and readable. The first main part of the book is subdivided into blood banking and transfusion medicine. Under blood banking, the chapters cover blood collection, donation process, component manufacturing, donor testing and storage; transfusion-medicine chapters examine the components for transfusion, pre-transfusion immunohematology testing, blood groups, blood products and their modifications, approaches to transfusion therapy in specific clinical settings, and transfusion reactions and complications. In addition, chapters that talk about apheresis, cellular therapy, and tissue banking in the hospital setting are included. Hemostasis, the second main part of the book, is subdivided into three sections. The first section, clinical coagulation, includes chapters about neonatal thrombocytopenia, inherited platelet function disorders, immune thrombocytopenia, immune-mediated coagulopathies, congenital bleeding disorders, and acquired bleeding disorders. The second section relates to laboratory testing of coagulation, with chapters about laboratory assessments of platelet disorders, von Willebrand disease, coagulation factor disorders, fibrinogen and fibrinolysis, tests for hypercoagulable state and for activation of the coagulation system, and laboratory support for anticoagulation. The third section discusses coagulation factor products. This book will be valuable for the education of trainees, practitioners, and future leaders in these fields.

Now in the 17th edition, AABB's Technical Manual remains one of the most globally referenced sources of information in blood banking, transfusion medicine and cellular therapy. It is considered a comprehensive text that is sought after as a valuable resource assisting both seasoned professionals and newcomers in finding critical information quickly. With updated methods, illustrations, charts and more, each of the 32 chapters have been revised to reflect the latest research in the field. What's New in this Edition:
* Key points summarizing each chapter.
* Expanded section on principles of immunology.
* Completely rewritten chapter on infectious diseases.
* Updates throughout to reflect current standards and other requirements.
* New information on numerous topics (eg, hospital regulations, specific gravity of blood components, FDA guidance on vCJD).

This reference discusses both technical & theoretical aspects of routine blood banking & is used throughout the world as a resource document for the performance of laboratory tests to ensure blood transfusion safety.

Ever since the discovery of blood types early in the last century, transfusion medicine has evolved at a breakneck pace. This second edition of Blood Banking and Transfusion Medicine is exactly what you need to keep up. It combines scientific foundations with today's most practical approaches to the specialty. From blood collection and storage to testing and transfusing blood components, and finally cellular engineering, you'll find coverage here that's second to none. New advances in molecular genetics and the scientific mechanisms underlying the field are also covered, with an emphasis on the clinical implications for treatment. Whether you're new to the field or an old pro, this book belongs in your reference library. Integrates scientific foundations with clinical relevance to more clearly explain the science and its application to clinical practice. Highlights advances in the use of blood products and new methods of disease treatment while providing the most up-to-date information on these fast-moving topics Discusses current clinical controversies, providing an arena for the discussion of sensitive topics. Covers the constantly changing approaches to stem cell transplantation and brings you the latest information on this controversial topic.

Transfusion Medicine and Hemostasis

Rossi's Principles of Transfusion Medicine is the most comprehensive and practical reference on transfusion science and medicine available. It features brand new chapters on the measurement of cell kinetics, obstetric transfusion practice, cord blood, transfusion alternatives and regenerative medicine. Produced jointly with AABB, the world's leading association in the fields of blood banking and transfusion medicine, it now has two companion CD-ROMs-one containing interactive case studies and one containing PDFs of all 66 chapters.

With a strong focus on the key areas included on the NCLEX-RN Exam ' s "management of care" section, Nursing Delegation and Management of Patient Care, 2nd Edition prepares you to successfully prioritize, assign, and delegate nursing care to other members of the health care team. It provides the latest information on the roles and responsibilities of the staff nurse related to the management of patient care, the core competencies required of the nurse caring for patients, as well as a wide range of leadership and management concepts nurses need to confidently manage patients within a hospital unit. This new edition is organized according to the new 2014 Magnet Standards of Practice to help you learn the skills and competencies magnet status hospitals require when hiring nurses. Learning objectives, key terms, critical thinking case scenarios, and application exercises in each chapter provide you with plenty of opportunities for review. A trusted author team with years of teaching experience in nursing leadership and management introduce current content related to the management of patient care in today ' s health care setting. NEW! A new table of contents reorganized according to the 2014 Magnet Standards. NEW! Addresses the competencies of the nurse ' s role with respect to the 2014 Magnet Standards. Coverage includes the latest information on the roles and responsibilities of the manager of patient care position, core competencies required of nurses caring for patients, and a wide range of management concepts new nurses need to know before entering practice. Emphasis on the NCLEX Exam "management of care" areas that you will be tested on, such as prioritization, delegation, and assignment. Clinical Corner and Evidence-Based Practice boxes within most chapters include real-world tips and advice on patient and client management, plus the latest research on practices relevant to chapter topics. NEW! End-of-chapter and Evolve NCLEX questions include analysis and application-level questions. NEW! The latest RN design gives this edition a fresh new feel that is easier to follow.

Immunohematology: Principles and Practice, Third Edition an ideal text for anyone who wants to master the theory and practices of today's blood banking.

The WHO guidelines on assessing donor suitability for blood donation have been developed to assist blood transfusion services in countries that are establishing or strengthening national systems for the selection of blood donors. They are designed for use by policy makers in national blood programmes in ministries of health, national advisory bodies such as national blood commissions or councils, and blood transfusion services.

This is the guide to tissue and cell donation that you have been waiting for. Policies and practices reviewed using specific donor casehistories as examples Multidisciplinary, multi-national team of editors andcontributors, with expertise in ethics, consent, transplantation,microbiology and tissue and cell banking Provides a guide to easier and safer practice in referrals,tissue procurement, cord blood collection and decision making ingeneral This unique book explores a range of issues related to the humanimpact of tissue and cell donation programmes around the world. Itaddresses the areas that are of key concern and have profoundimplications for the donors, recipients and healthcareprofessionals involved. Focusing on tissue, assisted reproductionand hematopoietic stem cells this book is essential reading for allthose working in the field of human transplant donation and thosewho regulate this field.
