Generative phonology is a branch of generative linguistics that determines the underlying set of rules governing the pronunciation of words in a person's native language. In general, generative linguistics refers to the theory that all human language is generated from linguistic structures that are hard-wired into the brain at birth. As a person acquires his or her native language, the structures that apply to that particular language are activated.

Phonology is a branch of linguistics that studies how languages or dialects systematically organize their sounds (or signs, in sign languages). The term also refers to the sound system of any particular language variety. At one time, the study of phonology only related to the study of the systems of phonemes in spoken languages.
