There is a growing knowledge base in understanding the differences and similarities between women and men, as well as the diversities among women and sexualities. Although genetic and biological characteristics define human beings conventionally as women and men, their experiences are contextualized in multiple dimensions in terms of gender, sexuality, class, age, ethnicity, and other social dimensions. Beyond the biological and genetic basis of gender differences, gender intersects with culture and other social locations which affect the socialization and development of women across their life span. This handbook provides a comprehensive and up-to-date resource to understand the intersectionality of gender differences, to dispel myths, and to examine gender-relevant as well as culturally relevant implications and appropriate interventions. Featuring a truly international mix of contributors, and incorporating cross-cultural research and comparative perspectives, this handbook will inform mainstream psychology of the international literature on the psychology of women and gender.

Getting at client issues by focusing on the process of symptom formation rather than on the details of the problem. In Process-Oriented Hypnosis, internationally recognized psychologist Michael D. Yapko provides clinicians with a new framework for utilizing hypnosis with clients. Yapko encourages clinicians to take a broader perspective, in which patterns rather than individual symptoms are the emphasis of therapy. He offers numerous insights into

ways clinicians can hone in on the process of how people come to suffer various types of emotional distress. Beyond these insights, Process-Oriented Hypnosis provides highly practical information and specific examples for integrating this innovative perspective into clinical work. The key patterns of human experience are central to the first section of the book, providing a sound conceptual foundation and a wide range of examples. In the second section, Yapko provides ten richly structured hypnosis session transcripts for clinicians to insightfully adapt to their clients' needs. Process-Oriented Hypnosis offers clinicians a fresh perspective for working with clients that can be integrated into many different treatment models.

Written by psychologists, historians, and lawyers, this handbook demonstrates the central role psychological science plays in addressing some of the world's most pressing problems. Over 100 experts from around the world work together to supply an integrated history of human rights and psychological science using a rights and strengths-based perspective. It highlights what psychologists have done to promote human rights and what continues to be done at the United Nations. With emerging visions for the future uses of psychological theory, education, evidence-based research, and best practices, the chapters offer advice on how to advance the 2030 Global Agenda on Sustainable Development. Challenging the view that human rights are best understood through a political lens, this scholarly collection of essays shows how psychological science may hold the key to nurturing humanitarian values and respect for human dignity.

This book was the first handbook where the world's foremost 'experts on expertise' reviewed our scientific knowledge on expertise and expert performance and how experts may differ from non-experts in terms of their development, training, reasoning, knowledge, social support, and innate talent. Methods are described for the study of experts' knowledge and their performance of representative tasks from their domain of expertise. The development of expertise is also studied by retrospective interviews and the daily lives of experts are studied with diaries. In 15 major domains of expertise, the leading researchers summarize our knowledge on the structure and acquisition of expert skill and knowledge and discuss future prospects. General issues that cut across most domains are reviewed in chapters on various aspects of expertise such as general and practical intelligence, differences in brain activity, self-regulated learning, deliberate practice, aging, knowledge management, and creativity.
