Scheduling Of Railway Infrastructure Maintenance Tasks

In the actual train timetable possible possession allocations are scheduled for maintenance so that it should not affect too much the regular train service. Many countries use timetabling software (e.g. Viriato (6), Opentrack (7)) for finding free intervals or periods with less impact to the train operators.

Scheduling Preventive Railway Maintenance Activities

Abstract. An important aspect of infrastructure management is the scheduling of maintenance tasks, which implies the allocation of tasks to different crews or machines and the determination of an execution order. To this end, different aspects have to be considered. On the one hand, the maintenance operator is interested in reducing direct maintenance costs, e.g. travel costs.

A railway maintenance scheduling problem with customer ...
Abstract. Before railway track maintenance crews can undertake any work, the allocation of activities to available time intervals in the train schedule as well as to crews must be undertaken. This paper puts forward a model aimed at determining the best allocation of maintenance activities and crews so as to minimise the disruption to and from scheduled trains and to reduce completion time.

Scheduling of railway track maintenance activities and ...

Get Free Scheduling Of Railway Infrastructure Maintenance Tasks

Abstract. This work addresses a tactical railway traffic scheduling problem focused on the optimization of train sequencing and routing decisions and timing decisions related to short-term maintenance works in a railway network subject to disturbed process times. This is modeled as a mixed-integer linear programming formulation in which the traffic flow and track maintenance variables, constraints and objectives are integrated under a stochastic environment.

Integrated stochastic optimization approaches for tactical ...
The pressing necessity to renew infrastructure assets in developed railway systems leads to an increased number of activities to be scheduled annually. Scheduling of renewal activities for a railway network is a critical task because these activities often require a

significant amount of time and create a capacity conflict in operation scheduling. This paper discusses economic and technological aspects, opportunities, and constraints in the renewals of multiple rail infrastructure components ...

Scheduling Infrastructure Renewal for Railway Networks ...

Railway infrastructure includes railway lines and other structures, buildings and equipment, together with the corresponding land, located on railway premises, designed for the management, passenger or freight transport, and for the maintenance of the infrastructure manager's property for these purposes. Railway line is defined as a railroad that has a start and an end, together with its ...

Get Free Scheduling Of Railway Infrastructure Maintenance Tasks

Railway systems have some further complicating properties affecting both operation and maintenance, that are worth summarizing on this introductory level: Interdependency between infrastructure and trains. All rail guided transportation have a tight coupling between the fixed rail and the moving

Survey of railway maintenance activities from a planning ...
Real track incident and inspection datasets were analyzed to raise degradation alarms that initiate the automatic scheduling of maintenance tasks. Optimum scheduling was realized through data analytics and job sequencing heuristic and genetic algorithms, taking into account specific cost & value inputs from comprehensive task cost modelling. Formal face validation was conducted with railway infrastructure specialists and stakeholders.
